

We are

TELTONIKA

Energy

Android/iOS v1.7.0

FW v1.7.8

To get the latest features and bug fixes, please update your charger's [firmware](#) and Android/iOS app to latest version (v1.7.7)

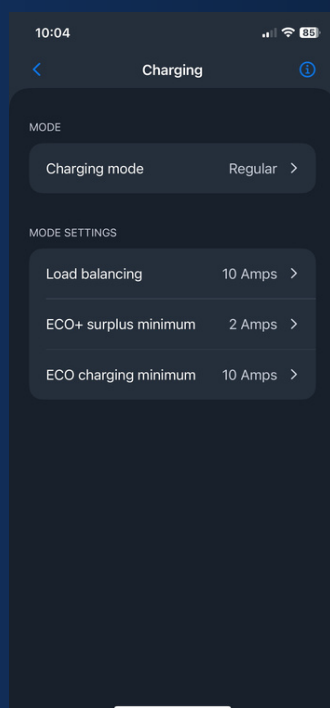

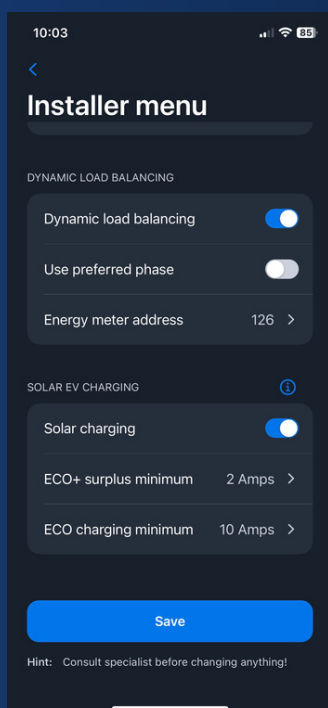

New features

Solar energy charging support

- Solar energy charging support

From now on, TeltoCharge is able to use green energy accumulated by solar panels. For configuration convenience, there are several charging modes provided:

- Regular - charging with the energy from the main grid
- Solar only - charging while using only green energy.
- ECO - charging by user set power limit. Prioritizes green energy and compensates with main grid power the rest.
- ECO+ - charging only when set (by user) amount of green power is available.

NOTE:

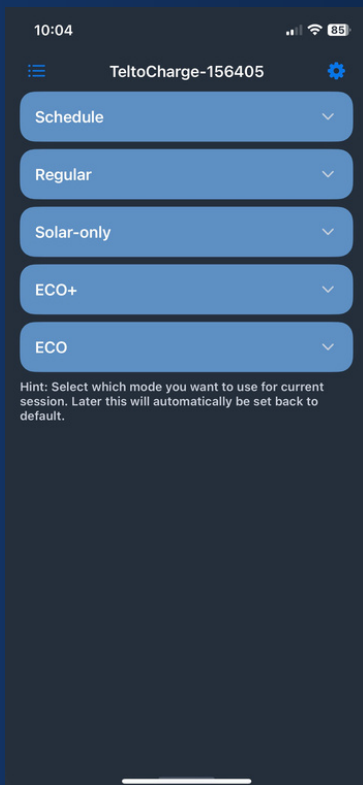

Solar charging option in User menu appears only after it is enabled in Installer menu

Improvements

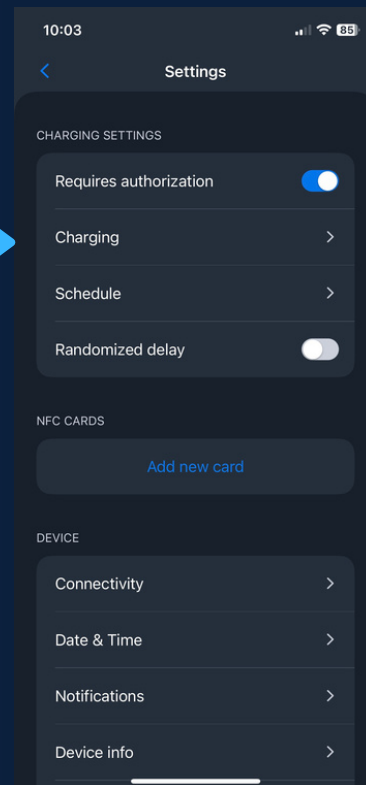

Charging mode selection

- *Charging mode selection*

From now on user will be able to tailor charging mode according to the situation on hand. Charging mode list will be available in these two places: Main charging window (during session) and in Main settings.

*Drop down in
Main charging window*

In User settings

Fixes

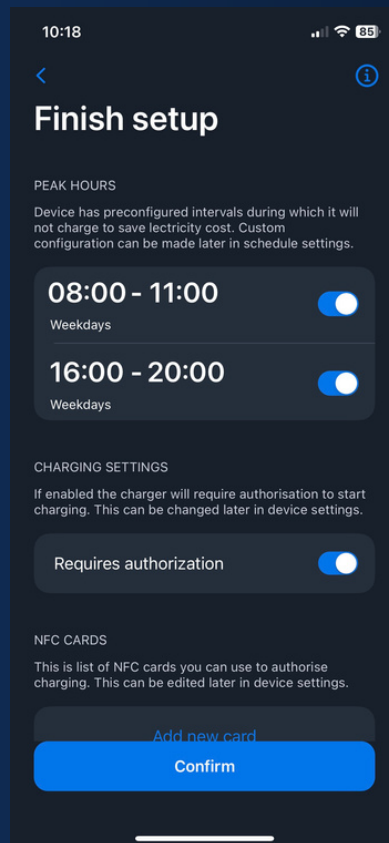

APP

- Android Bluetooth connection improvement;
- Minor performance optimization

Minor improvements

First setup wizard

- Optional Peak hours setup
