

# Inepro settings

← [Smart energy meters](#)

## RS485 parameters for energy meter Inepro PRO380-Mod

*Note: Energy meter parameters should match EVSE default parameters.*

RS485 parameter	EVSE default parameter value (configurable in mobile app)
Modbus adress	1
Baud rate	9600
Parity	Even
Stop bits	1

## How to configure Smart energy meter in mobile application

*Note: Users could use two meters with different addresses. Additionally, there will be settings for these energy meters in the installer menu (these settings are the same for both energy meters).*

1. Make sure you have updated mobile application and firmware version of the charger to the latest. (←[Firmware](#) and [iOS](#) / [Android](#)).
2. Go to installer menu in your application and set general parameters from table above:

3. To get data from energy meter, you will need to set the energy meter address in the “Dynamic load balancing” section:

4. Also, you will need to set the kWh meter address in the “Meter for power consumption calculation” section if you want to use it:

To find out specific settings, you will need to read the energy meter's documentation.
